FIS ALPINE

ENGLISH

atomic.com

BORN ON THE RACE COURSE.

All our Redster equipment traces its DNA to World Cup competition. Designed with input from skiers like Mikaela Shiffrin, Sofia Goggia, Marco Schwarz, and Aleksander Kilde, no detail is overlooked. When you step into a pair of Atomic Redster skis and arc the perfect turn in fresh morning corduroy, you become part of our sixty-five years of skiing heritage. You enter the tradition of meticulous preparation and winters spent perpetually seeking your best.

ALEKSANDER A. KILDE

"With the new Revoshock system, I feel like the stability of the ski has improved a lot, which makes it easier for me to ski the line I want."

MARCO SCHWARZ

"Even if the course conditions are not 100% perfect, thanks to the new Redster G9 Revoshock, I can push through my turns fully because the system absorbs impacts so well!"

MIKAELA SHIFFRIN

"The Redster G9 Revoshock provides the perfect combination of control, stability, and acceleration. These are the main things I need from a ski to perform on the biggest stage."

SOFIA GOGGIA

"Redster Revoshock helps me stabilize the ski during the entire turn and pushes me forward into the next one. It does that by reducing vibration and increasing stability. :)"

FROM RACE-COURSE TO THE SKISHOP

The development of a new ski technologies starts with input from the world's best skiers. What is the journey from the first prototypes of a new ski to FIS model development on to the final product for the consumer? What does it take for an updated design or technology like the new Revoshock modules to be applied to a production ski?

ALL OUR RACERS...

...from Marco Schwarz to Mikaela Shiffrin are obsessed with finding every advantage, physically and technically. The careful tuning of their equipment is essential. Professional skiers have up to a hundred pairs of skis to cover all disciplines. An army of service technicians are constantly testing, tweaking, and adjusting a range of prototypes until the demands of every athlete are met. The ski and ski/boot interface influences the responsiveness of the ski and determines if the athlete can stand at the start gate in total confidence. Twelve months a year, the team around the Atomic Race Manager, Christian Höflehner, works to test and improve new products with the athletes. New skis and prototypes are tested, then fine-tuned with the athletes. At the end of this process, only one or two of around 15 original prototypes remain, which are then further refined. Conditions for such tests must be as realistic as possible, the racers are constantly testing during the racing season.

PROOF OF CONCEPT

In the 2020/21 season, various athletes have already raced and won on the new REDSTER G9 REVOSHOCK. These athletes included Aleksander Aamodt Kilde, Mikaela Shiffrin, Marco Schwarz, and Lucas Braathen, who won the season-opening race 2020/21 in Sölden on this ski. Since then, the new Redster models have also been raced at other competition levels to great success. This success has continued into the 2021/22 season.

PRO CENTER

THE ULTIMATE SHOP FOR RACERS

SKI DEVELOPMENT

Once the construction and technology have been proven at the highest level, the ski goes into production for the Atomic FIS collection. The findings from empirical tests, and feedback from the athletes go straight to the R&D department who produce the blueprint for the FIS production ski. The skis are produced according to this blueprint and the corresponding technical features meet our highest manufacturing standards.

OUR PRO CENTER PARTNERS

When every fraction of a second counts, you need the right partner for exceptional service. Our Atomic Pro Center partners have years of experience with athletes and share this knowledge and love of the skiing with all fans of speed. From junior racers to World Cup athletes, our Atomic Pro Center experts will advise you and tailor the equipment perfectly to your demands. At every Atomic Pro Center, we focus on individual consultation and exceptional on-site service.

ATOMIC PRO CENTERS

Atomic Pro Centers are our competence centers created exclusively for FIS members and race enthusiasts, from junior racers to World Cup competitors. You'll quickly discover it's not just the gear that makes these places special. Our experienced alpine race technicians will work with you to find the perfect ski set-up.

Our main Atomic Pro Center is located at the Atomic global headquarters in Altenmarkt, on the same site as our ski production and R&D facilities. There is also an Atomic Pro Center at SNØ in Oslo, at Equipion in Moscow and 30 Atomic Pro Center Partners worldwide.

RACING SERVICES

Experts with World Cup experience will share our top-end racing equipment with you and build your own individual set-up. It enables racers on the way up to experience the unique service enjoyed by our top Atomic stars – from having their skis tuned in our Race Department with Wintersteiger equipment to having their boots professionally fitted by our Atomic race technicians.

APPOINTMENT

Racing services are available in Altenmarkt and Oslo, and any of our Pro Center partners in your region. To make sure we have enough time for individual service, please book an appointment in advance.

Please find our Atomic Pro Center and Pro Center Partners listed on the back page of the catalog.

REDSTER TECHNOLOGY

CONSTRUCTION

REVOSHOCK S

Utilizing a series of spring steel modules each encased in impact absorbing elastomer, the revolutionary Revoshock S technology acts like a built-in suspension system for your skis to block distracting shocks before they reach your feet. Whether you're straight-lining groomers or making fast turns at your limit, the race-proven Revoshock S provides a smoother, more precise run. But Revoshock S doesn't just absorb impacts — it rebounds them.

TOPSHEET

Redster Revoshock turns unwanted shocks into confidence-building stability and unparalleled acceleration. Structured topsheet: A structured topsheet massively increases durability and gives a high quality finish.

BASE

World Cup Base Finish
World Cup-level grinding means less friction and more speed.

From your ski tip to the binding plate, each spring steel module works in harmony to turn wasted energy into valuable acceleration out of the turn. And because a vibration-free ski leads to a more confident skier, you'll find yourself pushing harder and faster than ever before.

SIDEWALLS

CAP SIDEWALL

Full sidewall under the binding, from base to top sheet, for controlled power transmission and great edge grip.

FULL SIDEWALL

Full sidewall runs across the full length of the ski for precise steering.

CORE

ULTRA POWER WOODCORE

Made from strong beech and lightweight poplar – for supreme running stability and agility in our racing skis.

POWER WOODCORE

A sporty, dynamic ash and poplar woodcore that adds a ton of stability and dampens vibrations at speed.

LIGHT WOODCORE

Made from Poplar wood, this core optimizes the ski's weight without sacrificing any shock absorption or stability.

DENSOLITE CORE

A foam core that's agile and dampens vibrations – for effortless skiing.

LAMINATE

ULTRA TI POWERED

Our World Cup, athlete-proven technology Ultra Titanium Powered with updated double bonding is a Titanal laminate that runs from sidewall to sidewall adding stability, torsional rigidity and edge grip.

TI POWERED

A Titanal layer above and below the core creates supreme shock absorption, strong running stability and high torsional flex.

EDGE ANGLES

SIDE EDGE ANGLE

Precisely tuned edges are an important part of ski performance. A dull edge cannot penetrate the snow surface and will skid through a turn. An edge that is too sharp will grab and catch the snow surface creating unstable performance. Our skis are prepared with a side edge angle of 87.0° for more intuitive handling, easier skiing and better grip on hard snow and ice.

BASE EDGE ANGLE

All skis from our factory are delivered with steel edges that have been carefully machined with a precise base edge bevel for specific performance characteristics. For our FIS skis we're using base edge angles from 0.5° (SL) to 0.8° (GS and JR) and 1.0° (SG and DH). They lightly lift the ski edges off the snow for easy turning while maintaining excellent edge grip and aggressive tracking throughout the turn.

ICON

ICON 30

Immediate power

Delivering immediate power while allowing for more reactivity and response throughout the entire ski, Centralized Power Transfer enables the racer to be in better control of the ski by strategically placing the binding interface directly under the boot to centralize and optimize power transmission.

Built to win

A proven podium winner on the World Cup circuit, Icon has been adopted by some of the fastest skiers on the mountain. Built to handle the toughest race course conditions, Icon provides the highest level of performance without negatively influencing tolerance or rebound.

The future of race

One binding for all racing disciplines, Icon has been meticulously engineered to meet the constantly evolving conditions in top-level racing. Directing every ounce of energy immediately to the ski, Icon provides superior performance, agility and durability on hard and icy surfaces.

BINDING TECHNOLOGY

ICON

CENTRALIZED POWER TRANSFER
A wider base plate and race mounting pattern strategically position the binding screws directly under the boot to centralize and optimize power transmission. Delivering immediate power underfoot while allowing for more reactivity and response throughout the entire length of the ski, Centralized Power Transfer enables the racer to be in better control of the ski throughout the turn – in every discipline and type of course setting.

ELEVATED BRAKES
Our Elevated Brakes get up and out of the way, tucked in closer to the heelpiece of your binding, letting you ski more aggressive edge angles with less risk of catching the snow.

METAL RACE PEDAL
Designed to deliver the best power transfer from boot to binding, Metal Race Pedal allows the boot to sit directly on the AFD for more direct energy transmission.

AUTOMATIC TOE ADAPTION
The toe adapts automatically to your alpine normed boot height and width and ensures constant release values, even on worn out boots.

BOOT TECHNOLOGY

MIMIC PROFESSIONAL

Mimic Professional injects advanced foam compounds into revolutionary Mimic liner technology to create a customized fit that forms around the exact shape of the foot. The result is a liner that delivers the supreme fit, unrivaled comfort, and next-level performance.

1. HEAT THE MIMIC ZONES IN THE OVEN

2. INJECT PROFESSIONAL FOAM INTO THE LINER

3. MIMIC: NEXT-TO-SHELL FIT; PROFESSIONAL FOAM: NEXT-TO-FOOT FIT

PROFESSIONAL DUAL STRAP

The innovative Professional Dual Strap combines two elements together for secure, balanced performance. Elastic shock absorbing portion smooths out choppy terrain and increases damping while static section provides pure power and energy transmission.

PROGRESSIVE RACE SHELL

Our Redster TI and CS boots feature a special shell made from thicker but softer material. This provides a more progressive flex and better damping, plus a more supple feel – making it easier to ski aggressively in all conditions and on all courses.

V3 TONGUE SYSTEM

Customizable V3 Tongue System allows you to select the ideal tongue thickness to suit your needs. Choose between Low Volume (LV) fit, Medium Volume (MV) fit and High Volume (HV) fit for the ultimate interface between shin and liner.

3D STRETCH TOE BOX

Asymmetrically shaped for left and right, the new 3D Stretch Toe Box takes first fit and customization potential to the next level. Its 'Big Toe Friendly' construction maximizes the liner's available length allowing for a little extra stretch when important millimeters are required to achieve the perfect fit.

REDSTER SL

REDSTER SL CTD

Feel safe as you race

The unique combination of AMID, Holo Core and an extra-durable PC Racecase delivers World Cup level protection. Redster SL CTD also features Shocksense for monitoring impact-damage from falls and gates. Dial up your safety, dial up your speed.

Protect yourself with the perfect fit

The Redster SL is so snug you'll forget you're wearing it! It comes with a 360° Fit System and Atomic Live Fit – our unique memory foam system that molds to your head shape for an instant individual fit. Ready to face any race.

Worn by our World Cup athletes

Speed and safety are in every detail of the Redster SL. It also comes with an adjustable Chin Guard in the box. It's the new Atomic helmet for all slalom racers, from young guns to our World Cup pros.

PROTECTION TECHNOLOGY

SURPREME PROTECTION

SHOCKSENSE
Shocksense uses a sensor inside your helmet to transmit impact data to the Atomic Shocksense App. It determines whether you need to replace the helmet and can send an SOS alert, as well as your GPS location, to emergency contacts. Meaning you're free to push your limits with total confidence in your equipment.

AMID
AMID (Atomic Multi-directional Impact Deflector) is our revolutionary dual-density foam system that provides up to 40% higher impact protection than industry safety standards require.

INSTANT FIT

360° FIT SYSTEM + LIVE FIT
Live Fit pads form a wide band of memory foam that adapts precisely to your head for an instant individual fit. The progressive height-adjustable 360° Fit System lets you finetune the helmet to your head size – and also your headshape. It's 100% personalized comfort guaranteed for every skier.

360° RS FIT SYSTEM
The 360° RS Fit System lets you tailor your helmet to exactly your head shape, size and height. For an extra layer of fine-tuning, it also comes with customizable Live Fit pads on each side of your head that allow you to perfectly fit the helmet to a more oval or round head shape.

RACE CONSTRUCTION

CARBON RACECASE
The handcrafted Carbon Racecase is supremely stiff, strong and super light. Featuring a multi-directional layup for unrivaled protection and structural stability, it's specifically designed for racing.

ABS RACECASE
The injection-molded ABS Racecase is a stiff and strong shell, designed for guaranteed protection when skiing at speed.

PC RACECASE
Our super durable PC Racecase delivers world-cup level protection. It's a strong outer layer that provides protection from the high impacts you can get while racing, including hitting gates at speed.

SEE BETTER. SKI BETTER

FUSION DOUBLE LENS FDL
Fusion Double Lens (FDL) is the next-generation for double lens construction: it uses lamination instead of connecting the cylindrical lenses with an additional foam layer. This means an up to 20% larger field of vision compared to a classic double lens construction. And because the two lenses are laminated together, there's no double light refractions, no reflections and no decline in optics due to changes in atmospheric pressure at altitude.

CLASSIC DOUBLE LENS

FUSION DOUBLE LENS (FDL)

HD LENS TECHNOLOGY HD
HD lens technology uses crystals in the lens to create incredible snow visibility and high-definition contrast. Our guarantee of crystal clear vision – in all light conditions!

For masters athletes the ski length is a recommendation (except SG)! No restrictions regarding length, width and radius for women above 55 and men above 65!
The FIS recommendations and rules for ski length, radius and profile width can be found in the current FIS Specifications for Competition Equipment! (www.fis-ski.com)

REDSTER FIS USER RECOMMENDATIONS 2022 (SKI, BINDING, BOOT)

Ski selection of FIS products, both length and model, will be always very individuel and a subjective desicion. We noticed some common trends and following chart should help you to make the right descisions. The optimal skis FIS model and length is determined by the ability, the weight and also the strength of the user..
